TIME SAVING PRESCRIPTION SYSTEM

DOCTOR:

We have designed a Prescription System which will appeal to you. It will solve difficulties which have arisen since the beginning of Prosthetic Prescription writing.

We make up a 100 prescription booklet for easy writing and filing. The prescription is written on the first copy and transcript is automatically recorded on the second copy WITHOUT the use of carbon paper.

The second copy is retained in the booklet for easy simple filing. They are also personalized for you.

Both the equipment and the material have been used since 1951 and thousands of full and partial dentures are being worn in the mouth. Now for the first time it is being released on a national basis, through selected laboratories and trained personnel.

Here is how it works

1. Direct heat inside the flask and at one end of the denture.
2. Allow that end to harden first. At the same time . . .
3. Inject additional material into the opposite end — where the denture is still cold and soft, then allow hardening to continue until polymerization is complete.

Poise

is the word for Nobilium partials—the designed distribution of weight for exact balance and stability and retention. This provides for a natural feeling in the mouth, contributes to oral comfort, assures ease of mastication, functions dependably at all times. Poise is achieved through the technical expertness of your preferred laboratory's craftsmen, plus the use of Nobilium, "Aristocrat of Chromium Alloys," and all of the special Nobilium patterns, duplicating materials, investments and methods available to you when you specify Nobilium service. Among the advantages are the dependable results of Nobilium electric casting, electrolytic polishing, and the Nobil-Hinge for relieving stress in free-end saddle cases. For real patient approval and satisfaction, call your laboratory and be sure to specify Nobilium service.

HINTS FROM COOK-WAITE'S PROFESSIONAL DIVISION . . .

"Hopped-Up" Solutions

AS A side use of the Carpule® ASPIRATOR it is logical to think of expelling a small quantity of the anesthetic solution from a cartridge and drawing in other drugs — narcotics or injectable antibiotics.

At first, this seems like a good idea. But, if the cartridge plunger is depressed more than its own length, the exposed walls of the cartridge may become contaminated so that the solution is contaminated when the plunger is drawn back. One should also always be sure of the sterility — and compatibility and dosage — of the added ingredients.

"Do-It-Yourself" mixtures, therefore, are advisable only in exceptional situations.
